Search Notes

Dear Examiner Diaz:

Please find attached the results of your search for 09/556303.

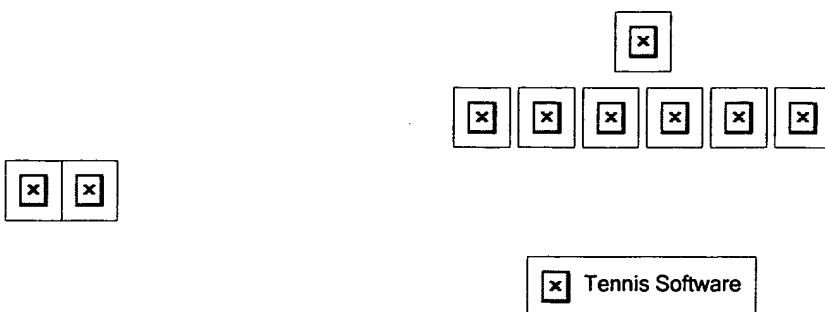

The search was conducted using the mandatory database lists for Business Methods.

These other sources were also used: Internet--

If you have any questions, please do not hesitate to contact me.

Thanks for using EIC3600!

Ginger

assic-tennis.sit.hqx (516 K) - Mac

Classic Tennis is Gary Dauphin's latest effort and possibly best to date. Color, digitized graphics, sounds, they're all included. The **tennis** matches, you against the computer start out slow but increase in speed as you get better so as time goes by, the challenge gets greater. Plenty of fun and enjoyment!

catdemo.exe (167 K) - DOS

CAT - Computer Assisted Tournaments - The Complete Tournament Management System. The computer software package, CAT, provides a host of features for organisers to efficiently manage sporting tournaments and allows persons involved to save considerable time and effort with the tedious and time consuming tasks involved in a tournament. CAT is available in an MSDOS version but a Windows 95 Version is under development. The first two modules of the Windows version are now available - Players Entry and Event Draw printing.

cp.zip (1,253 K) - Win

CourtTime Plus - Court reservation software. Runs on MS Windows 3.11, Windows 95 and NT. Tracks reservations for multiple sports and courts, i.e. Tennis, Racquetball, etc. Additional features: integrated instructor reservations/payroll, activity planning, permanent/contract court time, member billing, gate entrance.

match-book-1.0.sit.hqx (27 K) - Mac

Match Book 1.0 is a full featured **tennis** match charting program. Just what exactly does Match Book do? It charts 25 different aspects of the game! Charts - Points Won, Points Lost, First Serve Percentage, Percentage of First Serve Points Won, Second Serve Percentage, Percentage of Second Serve Points Won, Percentage of Net Points Won, Aces, Double Faults, Total Winners, Total Unforced Errors, Forehand Winners, Forehand Unforced Errors, Two-handed Backhand Winners, Two-handed Backhand Unforced Errors, One-handed Backhand Winners, One-handed Backhand Unforced Errors, Slice Backhand Winners, Slice Backhand Unforced Errors, Forehand Volley Winners, Forehand Volley Unforced Errors, Backhand Volley Winners, and more!

Match Trac - for Windows95

The Only Tennis Software You Will Ever Need. One of the most important pieces of Tennis Equipment you'll ever own. It doesn't fit in your tennis bag, it fits in your computer! MATCH TRAC - a complete

tennis charting and analysis system. MATCH TRAC provides extensive match analysis - over 50 critical aspects of your game are analyzed and reported.

swtrial.exe (935 K) - Win

Schedule Wizard is a new computer program that allows you to quickly and easily create round-robin schedules for virtually any league. All you have to do is tell *Schedule Wizard* the teams that are in the league, and the locations, days, and times of play.

scores.zip (24 K) - DOS

Scores is a system to help you keep track of your accomplishments on the tennis courts. By entering the date, the opponent, and the scores of all your singles matches, you can build a file of information covering years of tennis.

tennis.exe (40 K) - DOS

Tennis Fun - DOS game.

tmsdemo.exe (558 K) - DOS

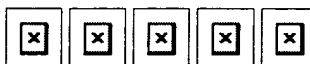

The Tournament Management System [TMS] has long been the standard in tournament software. It is the software of choice by more than 60 of the USTA National tournament sites. When making draws from 2 to 256, TMS allows you to choose from 5 types of consolations. It also places seeds, allows the placement of byes according to the new 1997 USTA Regulations, schedules automatically using either the Garman or set-pattern method, allows for manual scheduling, and handles multiple sites. It allows you to generate reports with the information you desire, and you can even produce a press list for the newspapers.

tms-beta.exe (4 M) - Win

The Tournament Management System -- long the standard in tournament software -- has just made a giant step with its TMS for Windows 95. Its users will be able to publish draws and download player information over the Internet from the Tennis Information Server, print larger draw sheets [e.g. 8.5x14, 11x17, 17x22], custom print these draw sheets with color or special fonts, switch between the main and consolation draws at the click of a mouse, and much more. tennis public

wctennis.zip (578 K) - DOS

World Championship Tennis - DOS game.

Automated universal tournament management system

Abstract:

...tournaments such as single or double elimination tournaments for any type of tournament event. The **tournament management system** includes a digital computer having a processor operating under a set of instructions, memory, at...

Summary of the Invention:

...directed to tournament scheduling and match result tracking devices and more particularly to a universal **tournament management system** capable of scheduling tournament matches...size) is seminal and all other information is scheduled around "tournament type information." Thus, a **tournament management system** may be universal in that it is adaptable to manage all types of tournaments or...

...Therefore, it is a principal object of the present invention to provide an automatic **tournament management system** that is capable of scheduling conventional tournament matches...

- ...Another object of the present invention is to provide an automatic **tournament management system** that may be user selected and operated for any type of conventional tournament...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** that is self-contained and operable independent of any electrical communication with any other devices...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** that is portable...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** that may manage a plurality of tournaments simultaneously. Another object of the present invention is to provide an automatic universal **tournament management system** that may be readily adapted for use in conventional arcade type games...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** that is capable of producing updatable tournament chart information...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** which is capable of producing tournament match cards...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** that is durable in use and economical to manufacture and use...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** which is efficient in operation and refined in appearance...
- ...Another object of the present invention is to provide an automatic universal **tournament management system** which is easy to install, simple to use, and trouble free...
- ...Finally, another object of the present invention is to provide an automatic universal **tournament management system** that simplifies tournament management. These and other objects will be apparent to those skilled in...
- ...different types of tournaments such as single or double elimination tournaments for any event. The **tournament management system** includes a digital computer having a processor operating under a set of instructions, memory, at...

How should CIOs deal with Web-based auctions?

Van Heck, Eric; Vervest, Peter

Communications of the ACM v41n7 PP: 99-100 Jul 1998

ISSN: 0001-0782 JRNL CODE: ACM

WORD COUNT: 762

ABSTRACT: Web-based auctioning is a rapidly expanding application of the **Internet** . The **matching** of demand and supply at the best price at one **specific** point in **time** is the additional benefit of a Web-based auction. The advantages, however, must be considered against lower switching costs for auction **participants** . Web-based auctions are a new way for an organization to interact with its market...

TEXT: (Chart Omitted)

Captioned as: Figure I.

Exploiting the **Internet** for commercial benefit has become a key theme for Chief Information Officers at most organizations...

...sellers and buyers. Savings are made by reducing transaction costs, increasing the circle of potential **customers** as well as by improving the search-and-find capabilities for all parties concerned [1, 2, 4]. Web-based auctioning is a rapidly expanding application of the **Internet** . The **matching** of demand and supply at the best price at one **specific** point in **time** is the additional benefit of a Web-based auction. The advantages, however, must be considered against lower switching costs for auction **participants** . Are auctions always beneficial to the company? In particular, which technical and business arrangements must...

Abstract: Exploiting the **Internet** for commercial benefit has become a key theme for chief information officers (CIOs) at most organizations. Web-based auctioning is a rapidly expanding application of the **Internet**. The **matching** of demand and supply at the best price at one **specific** point in **time** is the additional benefit of a Web-based auction. The advantages, however, must be considered against lower switching costs for auction **participants**. Are auctions always beneficial to the company? In particular, which technical and business arrangements must...

... worker will be motivated.

Once a job's score is determined, the goal is to **match** high-scoring jobs with people who want meaningful work. The "people variable" is referred to...

...This variable is also on a scale of 1 to 7, where 7 is highest. **Matching** the person and the job can be quantified by measuring and

Ginger R. DeMille

comparing MPS and GNS. Our research shows that the **match** -up of GNS and MPS accounts for much of what motivates IT people.

If managers...

...has a very positive attitude toward work.

Glen Tindal, director of MCI WorldCom networks, says **matching** the right people to the right **jobs** has become especially important as the company **shifts** its networks from being telephony- to Internet-based. "The results revealed that our internal data network engineering **jobs** have a high MPS, and we have extremely high GNS people," Tindal says. "My next...

...to coach managers to become better leaders and to coach their people through these turbulent **times** to ensure that we attract and retain the best talent in the industry."

The reverse also holds true. If you give programmers less meaningful **work** than what they desire, they develop a less-than-positive attitude toward **work**. An example of this is in systems development after an application is designed and installed. Many **customers** demand that the same programmers who developed the system remain on the project and maintain the system. But research shows that the meaningfulness of **work** decreases as the IS development people move to maintenance.

As more systems become **dated**, first-line supervisors of maintenance people must increase feedback and explain how the project is critical to the success of the business and its **customers**. In most banks and insurance companies, more than 70% of the systems **work** is maintenance.

The second thing managers must do is provide strong leadership during periods of...

Word Count: 1163

**Framework For Training -- Startup Docent's Web -based solution lets
companies measure how training affects job performance**
... The results help the company monitor the effectiveness of the
training content.

"Being able to **match** job performance and business objectives to
training gives companies a bigger bang for their training buck," says
Alexis dePlanque, a senior research analyst at the Meta Group. The **ability**
to monitor training effectiveness, she adds, is particularly helpful for
training **employees** with "front-line" positions, such as telemarketers,
salespeople, and telephone-support and help-desk personnel because those
jobs have clear performance metrics. These **workers** ' performance can be
judged by tracking specific measurements, such as how many calls they
handle in a **day** or how many products they sell in a quarter, she says.

"Many online and computer-based training products allow you to track
training progress, such as who's taking the **class** and how the test scores
are," says dePlanque. "What's different about Docent's product..."

...operated under the name MicroAge Distribution Co., uses Docent 2.0 to
train front-line **employees**. Pinacor, in Tempe, Ariz., has used the Docent
training product since January to train thousands of salespeople at its
resellers, says Peter Rourke, director of the **Internet group** at

**The sales-boosting power of efficient scheduling. (computer scheduling
for supermarket perishable, deli and bakery operations) (Supermarket
Instore Business)**

... Voine says that, despite the risks of schedule-distorting data gaps, the software generally helps **match** worker-hours with shopper patterns as it trims paperwork and helps with employee record-keeping.

While the importance of accurately projecting **worker - hours** for departments where food safety is a concern can't be overstated, computerization could also give headquarters executives more, not less, control over store- **level** decisions.

Sobeys' Malcolm, for example, marvels that he can now make sure that labor **hours** and POS activity are in sync - and nip over-staffing and under-staffing problems in...

...store in Ontario," he says.

Such oversight allows for obvious economies: If deli or bakery **schedules** have too many or too few **hours**, managers can expect a quick call from Malcolm to find out why. In addition, software suppliers say perishables and service departments can cut costs by getting full- **timers** to juggle multiple tasks during their eight- **hour shifts**.

MRI, which introduced a store-wide extension of its front end SuperSked software at MarkeTechnics last month, breaks perishables jobs into work units that can be **matched** with the store's available labor resources - an approach similar to other scheduling software with...

...a donut fryer's time," says IMB's Perlmutter. "But if he's a full- **timer**, he has to work an eight-hour shift."

"A person could

Not Pong: Finally--A Game That Gets Tennis Right. (BlueByte Software 's Game, Net & Match! sports game) (Software Review) (Evaluation)

... you get the timing down, you won't miss the first serve much during a **match**, unless you try something extreme.

On the court, you can play a single **match** against the **computer** or against another person (on a LAN or over the Internet) by choosing from a few male or female characters with different **ability levels**, then selecting the court surface (clay, concrete, grass, or carpet) and the number of sets.

The real fun in **GAME**, **NET & MATCH** comes from creating your own **player** for season play and entering him or her in various **tournaments** and competitions for prize money and **ranking** points. To create a **player**, you first choose a character, then you distribute 30 points among six characteristics (with a...

...speed, and strength.

Throughout the season you can choose from a list of competitions. The **game** lists **date**, location (with a nice variety of arena graphics), court type, and prize money for each **tournament**, and the more the prize money the tougher the opponents. Enter an upper-echelon competition before your **player** is ready and you might not make it past the first round, losing valuable **time** and **ranking** points in the process. You have to be smart to make it to the big **time**.

The best part is that your **player**'s abilities increase, depending on your style of play. For example, if you like to...

...many backhand points, your backhand ability won't improve. So, as the season progresses, your **player** continually gets better with experience--as in an RPG.

FORTY LOVE

GAME, NET & MATCH has a lot that will please tennis fans. However, smart tennis players will find certain...

Endgame: Deep Thought stalks the masters. (computer designed for playing chess) (includes related article on technical approach)

... witnessed the best chess game ever played by a computer against a human opponent, a **timed match** between international grand master Anatoly Karpov and computer-chess champion Deep Thought. And it was...

...standing ovation to the man--for barely winning.

Just 43 seconds remained on Karpov's **clock** when Deep Thought resigned.

People have long accepted the superiority of machines at routine tasks...

...stamping out Ford Taurus fenders or searching through pages of stored information. At the same **time**, chess-playing computers have evolved from laughable 1950s experiments into serious rivals to the world's grand masters. But the prospect of machines defeating the finest **players** in this quint-essential test of human ingenuity and determination? Beating the best? Inconceivable.

Karpov, 39, had been favored--both statistically and sentimentally--to win his February 2 **contest** against Deep Thought, played on the Harvard campus, in Cambridge, Massachusetts. Karpov's number-two world **ranking** means that only one person on earth, world champ Gari Kasparov, is expected to beat him at the **game**. For anyone else, a **contest** against Karpov, winner of a record 77 global competitions, is a defeat waiting to happen...

...already taken a turn against Deep Thought. He'd whipped the computer in

an exhibition **match** four months earlier. After that **match**, he professed his broad confidence that chess computers would never be able to beat the best human **players**. "Chess is wider than calculation," Kasparov explained. "It's even wider than logic. You have..."

...its loss to Kasparov last October, the computer played its black pieces forcefully during the **game's opening**. As Karpov strained to keep his non-human rival from turning a slight midgame edge...

...pro-human sentiment grew thick.

More troubling to the Russian than the computer's apparent **skill** was the **clock**. Karpov's early deliberations in the **timed game** had allowed his **clock** to wind down relentlessly. When Deep Thought still had 25 minutes left in which to make all of its moves, Karpov was down to 5. If he went over his **time** limit, Karpov would lose by forfeit.

Deep Thought's brain consists of two special-purpose...

... to do one.

Post-office managers try to fill most of their manpower with full-
timers since there is a limit on part- **timers** . But once a base staffing
level has been chosen, if it doesn't **match** the **work** load, they can
fine-tune hiring needs with ASRMS. Posing 'What Ifs'

ASRMS is a simulator that can ask "what-if" questions. These include,
what would be the effect on **work** volume of using more or fewer part-
timers , more or less overtime, etc. ASRMS allows postal managers to figure
quickly and easily what adjustments need to be made to the basestaffing
level to get the mail volume done with the proper **work** force, Fox said.

Using ASRMS, the **engineers** factor in various approaches to
matching the workload. "A lot of things can be done to raise man **hours**
in high-volume periods," Royall said, such as using more "flexies," or
part- **time** flexible **workers** , using more overtime, reducing training and
so on. In low-volume periods, people can be...

... degree by data processing professionals for routine data processing
functions like database management. Mix and **Match**

"As you do more **date** processing no one program does what a
professional data processor might want to do. So you need the ability to
mix and **match** programs, much like you mix and **match** stereo equipment,"
Agin said.

Data-processing professionals and corporate MIS groups, Agin said,
have realized...

...for the microcomputer, is really a data-processing tool. After ignoring
microcomputers for a long **time** , MIS managers have decided that they need
to bring microcomputers and microcomputer software into the...

...processing departments, such as batch updating of data-bases.

Agin said he sees two general **classes** of microcomputer users in the
market these days. "There are people who are not data-processing
professionals but must use microcomputer tools. They will respond to
advertising when choosing a **software** package. When corporate MIS **groups**
choose **software** , they start with a need and study the market to pick a
package that best...

...**(to introduce modem for Sega and Nintendo game systems allowing play on**
its video game network)

TEXT:

...all that is necessary to get connected to the network, Catapult added.

Once connected, the **network** finds a **match** for the user, the **players** telephone numbers are exchanged invisibly to the **players**, the modem hangs up on each end and one modem then calls the other users modem again. Neither user is aware this is happening, Catapult said, and since **players** 'machines call each other to actually play, the network capacity of 2,000 simultaneous users is enough for millions of games a week. Each system exchanges the information each **player** has decided to share with the other, including each **player** 's "handle."

Then **players** begin play, in **real time**, and during play can send pre-recorded messages to each other, such as brags or taunts, by making special moves with the controller. At the end of the **game**, **players** can continue to play with the same **player** or disconnect and log back on to find another **competitor** or a new **game**.

If a **competitor** cannot be found immediately, i.e. in less than one minute, the modem sends the particular **game** and **skill level** to the network and then disconnects. While waiting for a **match**, the **player** can look at **game** tips or play in single-**player** mode. Since Catapult handles all the calls first, no **game**-play calls are made without the permission of the person being called, the company said. In addition, Catapult can keep up-to-**date** records from the management of the log-ons concerning **rankings**.

Also, all calls are local calls unless the **player** specifically indicates otherwise. Catapult also maintains that parents can control **game** play as

Ginger R. DeMille

spending limits can be set on the account or on the Smartcard.

The company also said it plans to **work** in cooperation with **game** developers to offer extensions to their games that can be downloaded into the system via...

Online Hiring: HR Pros Are Screening Candidates in Their Sleep; Ddi's New Web -Screen(TM) Has Caught on with Major Players Such As Bestfoods

PR Newswire

Monday, January 24, 2000 08:02 EST

JOURNAL CODE: PR LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT

DOCUMENT TYPE: NEWSWIRE

WORD COUNT: 1,133

Online Hiring: HR Pros Are Screening Candidates in Their Sleep; Ddi's New Web -Screen(TM) Has Caught on with Major Players Such As Bestfoods

...their desk will be qualified ones.

What is it?

Web-Screen is an around-the- **clock** online orientation, qualifying, screening and reporting tool that DDI tailors to meet the needs of any company searching for **candidates** with specific **skills** to fill vacant positions. Typical **job** boards that allow **candidates** to apply for **jobs** over the Internet may increase the quantity of applications a company receives but do not increase the quality. Web-Screen takes Internet recruitment to the next **level** by accurately qualifying the growing **candidate** pool and allowing the most qualified **candidates** to rise to the top.

" **Job** boards have provided companies with 'haystacks' of resumes," said Richard S. Wellins, DDI senior VP...

...Web screening technologies provide companies with the means to find the needle (the most qualified **candidates**) much faster and at lower cost."

Ginger R. DeMille

Time is money

A slow selection system costs a company more than money. Qualified **candidates** are in high demand and are usually being recruited by more than one organization. If a company cannot identify prospects and make an offer quickly, it will lose the best **candidates**. DDI's Web-Screen helps companies focus by qualifying good **candidates** in a fraction of the **time** and for significantly less money than traditional methods. Web-Screen saves valuable recruiter **time** through **automatic matching** of **candidate** qualifications with company and **job** specific requirements. In fact, Wellins estimates up to a 50 percent reduction in screening costs. Additionally, speeding up the qualification process means organizations can "nab" **candidates** before their **competitors**. With Web-Screen, companies have completed the screening and **interview** process and made **job** offers in less than 48 **hours**.

How does it work?

Web-Screen combines the latest Internet technology with DDI's advanced

TEXT:

...in Copenhagen, Denmark on December 1, 1998. The Danish team is comprised of 24 full **time employees**, who were formerly part of LSI Logic Corporation. The team is well known for its...

...core, and system on chip (SOC) design expertise, as well as its full set of **customer** deliverables. As part of LSI Logic, it has been responsible for a number of highly...

...Inc. are working closely to ensure a smooth transition of the team. The MDDC will **work** on developments for MIPS as well as providing a high **level** of support and design expertise for European-based MIPS **customers**. "We are tremendously excited about the addition of this renowned team to our company," said...

...their experience in designing and developing consumer related and low-power MIPS architecture solutions. Their **work** in core development for Windows CE* and low-power applications dovetails extremely well with our product plans, as these **skills** enhance our existing **abilities** to design extremely powerful processors. Uniting the two teams will enable MIPS to provide the...

...the needs of emerging applications. The growing need for performance, combined with low power design **skills**, positions us to become a major **player**. " Jens Kjelsbak, Director and General Manager of the MDDC will report directly to Mr. Lev and will head the team in Denmark. "The **skill** set of the people within the MDDC is a perfect **match** to the MIPS **engineering group** in Mountain View," said Jens Kjelsbak. "We see our relationship with MIPS as a great opportunity to get the benefits of the MIPS architecture out to a larger number of **customers**." Plans call for

Ginger R. DeMille

the **work** of the team to focus on developing products for synthesizable and optimized cores, as well...

...delighted that the team will be kept together and continue to function as a key **driver** in the development of the MIPS architecture. Our agreement with MIPS Technologies will enable us...

...MIPS Denmark Development Center team brings a superb record of success with MIPS designs and **skills** that will accelerate MIPS' access to its target markets. Furthermore, it will give us a significant European presence and will provide the kind of support that **customers** want. We are also pleased with LSI Logic's support of this transition, and believe...

...Developers can choose from a broad menu of price/performance options that include execution units, **clock** speeds, instruction widths (16-, 32- or 64-bit), cache sizes, memory bandwidths, memory protection schemes...

-PETERBOROUGH SOFTWARE : Salvation Army chooses PS Enterprise to organise its troops effectively

TEXT:

...Salvation Army is a complex military operation, fundamentally based on the thousands of volunteers and **employees** involved. To manage this enormous human resources challenge, the organisation has chosen PS enterprise pensions...

...the Government. It runs 50 hostels for the homeless, providing accommodation for over 3,400 **individuals** and employs some 3,500 people running care homes, rehabilitation units, community centres and services...

...Christian missionary and social welfare programme worldwide involves some 17,400 serving officers; 1,100 **students** at officer training colleges and 76,700 staff in non-uniformed support and professional roles - covering 103 countries. Each year, officers are moved to new postings, depending on their **skills** and taking account of every **individual**'s particular situation - and the needs of the organisation. In 1998, for example, on 28th May, some 100 officers and their families will be moving on that one **day**, to new locations in the UK and around the world. This must be organised and carried out with "military" precision, and be based on **appointment** decisions made using complete, accurate data. Having detailed, up-to-**date** and readily accessible data on every **individual** is therefore critical to the success of the Salvation Army. Major Betty Matear, project manager...

...decision to move to PS enterprise. Says Matear: "Our old system was expensive to maintain, **time** consuming to support and could not provide the highly flexible and complex solution we require..."

...decentralised but consistent system; many of the regions had to some extent developed their own **individual** systems. We could not provide adequate information for today's human resource requirement. "With the

Ginger R. DeMille

introduction of new middle management and territorial structures late in 1996, it was a good **time** to review our whole HR system. Howarth Consulting Director, Kevin Miller, assisted the HR team...

...an NT network. However; it had to take into account a move to new premises **scheduled** for Autumn 1998 and the fact that the existing Headquarters building in Central London was not suitable for installing an extensive new network. The Army has compromised to **date**, running a closed system to complete development of the personnel and payroll under NT - although...

...These are: to enable single data entry at the earliest point (ie out at regional **level**), avoiding duplication of effort and removing much of the manual burden; to establishing just one...

...available, subject to authorisation and security; to be flexible, to meet the needs of all **levels** of management. "To go five on our eight payrolls just four months after signing the contract is evidence of Peterborough's commitment to **work** with us to meet our needs." Major Matear continues: "We see our HR computer system as a vital tool in the effective placement and management of our human resources. **Skills matching**, placement of officers to take into account personal circumstances, family situations, aptitudes, competency, training completed ...

...need." Concluding, Major Matear notes: "Both Peterborough Software and The Salvation Army have kept to **dates** for development **schedules**; we have never yet had to adjust the project plan. That is a rarity in...

...mainframe or PC. Products are developed specifically for each hardware platform to ensure that they **work** to maximum efficiency and harness the true power of an organisation's computer environment. Peterborough **Software** is part of the Rebus **Group** plc, one of the Top 20 European **software** companies. Other businesses in the **group** include Rebus insurance Systems, Rebus Human Resource Services, Rebus Local Government, Rebus Computer Services and...

NT SERVER GROWS UP TO BECOME A SERIOUS CHALLENGER TO LOW AND HIGH-END
OPERATING SYSTEMS

... occasion was remarkable only for the uncharacteristic lack of glitz and fanfare that accompanied the **day**, especially since the operating system has gone from strength to strength since its inception. In that short space of **time**, Windows NT has been a runaway success at the low end of the server market...

...at the predominance of Novell Inc's NetWare, while at the high-end putting enterprise- **level** server operating systems dominated by the Unix camp under a state of alert. Of course...

...based on his company's "top to bottom Windows NT operating system." An up-to- **date** indicator of the fortunes of NT since its birth in the server market was recently...

...a report in August estimating that NT Server sales this year will for the first **time** pass all versions of Unix combined, and nearly catch up to NetWare. Now that Version...

...the result of an internal survey in which over half of its existing HP-UX **customers** expected to need Unix-NT integration before the end of 1997. Remember, Hewlett, along with...

...as a server? The short answer is that NT has a distinct advantage against its **competitors** at the workgroup **level**, but when it comes to the mission-critical database server it still leaves a lot to be desired. NT's key advantages over Unix at the workgroup **level** include ease of use and configuration; lower overall cost; and easy integration with Windows desktops...

...perceived that NT has a lot to offer at the low-end server operating system **level**, plaudits are much more hard to come by at the enterprise **level**. Number one bugbear is the oft-voiced non- scalability issue which has come to linger like a bad smell around all NT-versus-Unix discussions. It's clear that NT **Server** has difficulty **matching** the scalability of Unix **servers**. With several Unix vendors offering 32-way and 64-way machines, even with the new...

...are currently pinning most of their scalability hopes, although cluster systems are primarily for increased **availability** rather than performance gains. There's a whole raft of NT types including DEC, NCR...

...able to boast quite the number of system management and security tools that its Unix **competitor** has, but adds that nearly all the major systems management and security vendors have converted...

...64-bit NT operating system, to be delivered by a DEC, Intel, Microsoft axis - some **time** in 1998 - and the Wolfpack clustering application programming interfaces as proof of its intent to...

...7 percent increase in corporate giving totals over 1993. Corporate
cash contributions, including direct and **matching** gifts, totaled more
than \$6.8 million. The estimated retail value of in-kind donations...

...to address vital needs
in our communities."

Microsoft has a long-held belief in supporting **individual employees**
donations of **time** or money to the charities of their choice. In 1994,
employees gave over \$4 million to a broad array of charitable causes
through the **Matching Gifts program** and the Microsoft Giving Campaign.
This represents an 11.9 percent increase over **employee** giving totals in
1993. Microsoft **matches** these contributions to any eligible, non-profit
group dollar for dollar, up to \$12,000 per **employee** annually.

Ginger R. DeMille

"Microsoft's generosity in **matching employee** gifts is one of the best benefits the company offers," said Dennis Abbe, a software...

...with my wife and me in our efforts to address a variety of community concerns." **Employees** are also actively involved in the Microsoft Volunteer **Program** (MVP), which **matches** interested **employees** with volunteer service opportunities in the community.

Corporate and **employee** in-kind software donations also continue to grow in scope, allowing Microsoft software to reach organizations nationwide that might not otherwise have access to needed technology. In 1994, corporate and **employee** in-kind donations of Microsoft software increased 15.8 percent over the previous year. "Microsoft...

...plagued by learning disabilities," stated Melinda Guinaldo, Executive Director of Assessment and Treatment Services Center. " **Scheduling** therapy sessions and locating other community resources for them has become more accelerated, thanks to...

...Director of the Central County Regional Occupational Program explains, "As a delivery system for preparing **students** for the world of **work**, the ROP in Santa Ana must keep pace with the advanced technical **skills** and emerging technologies in today's workplace. Thanks to Microsoft's generous donation of up-to- **date** software, our **students** will be equal to the challenges offered by modern employers."

Microsoft's corporate contributions focus...

...company's direct and capital gifts are targeted primarily to the communities in which Microsoft **employees** live and **work**. Microsoft also sponsors a scholarship program which awards both undergraduate and high school scholarships to encourage **students** to pursue careers in computer science and other technical fields.

Founded in 1975, Microsoft is...

Abstract: OFFICETECH/sup. (R)/ is a start-up company providing office assistance over the **Internet**. It certifies assistants' **skills**, **matches** them with potential clients, supervises the quality of the **work** done and provides **software** tools for online collaboration. The founder, Gayle Barr, believed that this type of assistance would...
... be the predominant model due to a convergence of several trends. First, advances in the **Internet** technology, GroupWare, and their acceptance by managers and professionals coupled with growth in the amount of coordination across **time** zones due to globalization and expansion of the number of telecommuting **workers** indicated that clients would be willing and able to **work** in a virtual relationship with their assistants. Second, extensive corporate downsizing and a large number...

... adequate permanent assistance available. In addition, many companies were now using large numbers of part- **time** and contract **workers** on an ongoing basis for clerical and professional positions. Thus, Barr reasoned, the technology was accessible, the need for part- **time** and temporary administrative assistance was apparent and clients were now sufficiently comfortable with such arrangements...

Title: Provably efficient scheduling for languages with fine-grained parallelism

Abstract: Many high- level parallel programming languages allow for fine-grained parallelism. As in the popular **work - time** framework for parallel **algorithm** design, programs written in such languages can express the full parallelism in the program without...

... is to schedule tasks to processors dynamically so as to minimize not only the execution **time**, but also the amount of space (memory) needed. Without careful scheduling, the parallel execution on...

... more space than a sequential implementation of the same program. This paper first identifies a **class** of parallel schedules that are provably efficient in both **time** and space. For any computation with w units of **work** and critical path length d , and for any sequential schedule that takes space $s/\text{sub } 1/$, we provide a parallel **schedule** that takes fewer than $w/p+d$ steps on p processors and requires less than $s/\text{sub } 1/+p.d$ space. This **matches** the lower bound that we show, and significantly improves upon the best previous bound of...

...space for the common case where $d \ll s/\text{sub } 1/$. The paper then describes a **scheduler** for implementing high- level languages with nested parallelism, that generates **schedules** in this **class**. During program execution, as the structure of the computation is revealed, the **scheduler** keeps track of the active tasks, allocates the tasks to the processors, and performs the necessary task synchronization. The **scheduler** is itself a parallel **algorithm**, and incurs at most a constant factor overhead in **time** and space, even when the **scheduling** granularity is **individual** units of **work**. The **algorithm** is the first efficient solution to the **scheduling** problem discussed here, even if space considerations are ignored.

...Abstract: introduced a system to make sure it has enough-but not too many-assistants to **match** the number of **customers**. Simply hiring more staff is not the solution. They might be busy at rush periods, but then they stand around doing nothing for the rest of the **time**. One of the top priorities was **customer** service where a significant mismatch between staff **availability** and business **level** at various **times** of the trading **day** was identified. This mismatch had developed progressively as changes in trading patterns had not been **matched** by changes in staff policy. What was needed was a new, flexible staff policy and, of equal importance, a labour management system, Care Interactive **Software** Staffplanner Suite, to apply that policy consistently throughout the whole group.

Title: Gymnaste, a solver for nurse scheduling using constraint programming: a technical and sociological challenge

Abstract: Nurse scheduling is a task which aims is to affect nurses on a time schedule , in respect with the needs of each time shift , taking in account legal and collective constraints, and individual wishes. It is a highly difficult and complicated problem that has already been explored using several operational research methods. Nevertheless, those methods are not flexible enough to match the individual requests from nursing staff and they don't allow for effective management of unforeseen absences. Therefore, they did not lead to commercialized software packages. The paper explores the use of constraint programming and object programming to build a powerful tool providing a flexible way to manage nursing schedules capable of scheduling 30 nurses in a single skill - class in under 12 seconds. The challenge is not only technical but also sociological, because such...

... affect the relations inside the team, leading to a more participate management of the head- nurse , and inside the hospital.

Title: Computerized job bank to match students with firms

Abstract: Corporations seeking entry-level marketers are going to get a break courtesy of the AMA. The AMA and TMS Systems Inc. have developed a Marketing **Student Job Bank** which will give corporations and **students** the chance to exchange and **match** information via **computer** processing. Corporations can list in the bank their company name; the name, address, and phone...

... of the company; and up to five positions the corporation wants to fill. For each **job** listed, the company can provide the position's title, the area of **work** the **job** involves (such as sales management), the state in which the office is located, the **date** the position will be available, the approximate salary, the preferred degree **level**, and the minimum grade point average required. In up to 100 words, corporations can also...

COMPUTER -AIDED PERSONNEL SCHEDULING

Author: KOELLING, CHARLES PATRICK

Degree: PH.D.

Year: 1982

Corporate Source/Institution: ARIZONA STATE UNIVERSITY (0010)

Source: VOLUME 43/08-B OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 2734. 330 PAGES

COMPUTER -AIDED PERSONNEL SCHEDULING

...growth of the service sector of the United States economy has led to problems of **scheduling** personnel. In particular, as **customer** demand varies throughout the **day** the number of **employees** required also varies. Assigning personnel to **shift** types in order to **match** varying workload requirements is known as **shift scheduling**. The research reported here addresses the personnel **shift scheduling** problem using a **computer**-aided approach. A complete **scheduling** model is developed which generates **employee** requirements, **schedules employees**, provides an evaluation of the **schedule**, and allows system iteration to improve the **schedule**. This is accomplished by a **computer** package which combines queueing analysis, goal programming, and simulation. It is shown that the **Computer -Aided Personnel Scheduling** model (CAPS) provide valuable flexibility which is unavailable with models found in the literature. Objectives related to **employee target levels** both for each period and for the entire **schedule**. Cost factors are included to provide the decision maker a wide range of options for priority assignments to the objectives. This also includes the capability of developing a **schedule** with or without workforce size restrictions. Further flexibility is provided by the potential to consider

TITLE: Serving Up Dynamic Content: Cobalt powers up the Legg Mason Tennis
...

Cobalt Company, an Internet technology solution provider, rearchitected the Legg Mason Tennis Classic's Web site to provide current scoring and news during the tournament. Tools used are Microsoft SQL 2000 SP2, Microsoft Visual Basic .NET, Microsoft Windows 2000 SP 2, Microsoft Content Management Server 2001, ASP.NET, Visual Studio .NET, and ADO.NET. The older Web site was maintenance-intensive and packed with stale data because nontechnical staffers did not have the time and skills required to administer content. Dynamic content was absent, except for group ticket-order processing. The new site is extensively dynamic and includes a secure payment system that uses VeriSign network for group ticket orders; Microsoft Content Management Server 2001 to allow nontechnical staff to manage dynamic content in close to real time; and a full-functioned .NET application to serve up-to-date scores and match results to site visitors. On the administration side, a custom interface provides menus and checkboxes for managing complicated data as it is received during tennis matches. To analyze the administrative needs of the client, Cobalt established a hierarchy among the Web site sections, then ranked them by level of maintenance needed each week. Then a timeline for documentation, initial development, and deployment was developed. Time available for application development was short, so the team prioritized the feature set to get...

Hire.com's Hire.com e-Recruiter, an online, **Web**-based recruiting service, gets very good marks overall. Its templates can accelerate **job** posting creation, as well as **automatic** applicant sourcing and **skills matching**. Users are charged based on the size and usage **levels** in their organization; fees generally range from \$8,000 to \$25,000 per month. Hire.com e-Recruiter **automatically** filters and sorts large pools of **job** applicants into a smaller set of qualified **candidates**. Recruiting **time** can be reduced, and hiring managers can home in on possible hires immediately. Hire.com custom-configures Hire.com e-Recruiter to **work** neatly with the employment section of a corporate **Web site**. As part of the high-end monthly agreement, Hire.com assigns a Best Practices Manager ...

...training and advice, to each client. Hire.com avoids a metaphor commonly used by other **Web**-based recruiting services that present convert a paper resume to an **electronic** version. Instead, Hire.com invites possible **candidates** to prequalify for any current or future positions. Applicants fill out an online form consisting of information about **job** type, salary, and geographical preferences. If contacted, applicants are asked to fill out another questionnaire...

...Testers found Hire.com easy to use, and were able, for example, to build several **levels** of approval into the screening process.

Care worker arrangement system for e.g. day care service provider, has care worker matching section which adjusts care worker with nature that corresponds to level of heavy labor with patient

Abstract (Basic):

... A care **worker** matching section (15) adjusts a care **worker** with nature that corresponds to the **level** of heavy labor with a patient. A force **level** sorting section (14) categorizes the patient

Ginger R. DeMille

according to **level** of heavy labor required for each health care of patient. A **customer** information extraction section (13) **draws** out the list of patient of circulation plan and patient's **customer** information.

... An INDEPENDENT CLAIM is also included for a care **worker** arrangement method...

...For adjusting patient and care **worker** for e.g. **day** care service provider...

...Ensures optimal combination of the patient and care **worker** .

Golf competition network creating method, involves tracking variety of performance metrics of golfers , gathering demographical information of golfers and managing communication and wagers between golfers

Abstract (Basic):

... The method involves adjusting scores by using index, slope rating system and course rating system to equitably compare the scores of the rounds that will include other network persons rounds, live and archived professionals rounds. A variety of performance metrics of network golfers rounds are tracked, demographical information of the golfers are gathered, and wagers and communication between network golfers are managed.

Method for drawing lottery over internet **by use of sports match**

Abstract (Basic):

... result after the selected sports match is finished so it can increase a match analysis **ability** of the user and activate the non-popular sports match.

... The method comprises several steps. First, a user accesses a main **server** , and searches for a sports **match schedule** (S10). The user selects one event among the various sports **matches** like a football, a baseball or athletic sports(S12), selects one item among a score, a **player** or a theme on the selected event according to a preset scheme(S16), purchases a lottery ticket corresponding to the selected item(S18), and writes a **match** forecast on the lottery ticket(S20). According to a result of the selected sports item, the purchased lottery ticket can be **drawn** (S22). The user receives a gift or cash if the user wins in the lottery(S28). Finally, the main **server** stores the lottery result at a member management **database** .

Employment facilitating method through internet, involves receiving selection preferences of matched job seeker profiles from employer and notifying employer's desire to each job seeker

Abstract (Basic):

... An employer's job profile is matched with job seekers profiles on the basis of compatability. Selection preferences of the matched job seeker profiles are received from an employer and employer's interest is notified to each job seeker. Acceptances received from job seekers and their personal contact details are notified to the employer within a predetermined time frame.

... a) Employment facilitating apparatus; Computer program product for facilitating employment; Employment facilitating system; Job profile and job seeker profiles comparison method; Job profile and job seeker profiles comparison system...

...For facilitating employment/recruitment through internet , LAN or WAN ...

...Enables an employer to efficiently find suitable and skilled candidates for their employment positions. Provides each job seeker with opportunity to specify and be matched with potential employers while taking into account...

...The figure shows the flowchart explaining basic employment matching procedure...

Scheduling software for scheduling appointments , has set of access rules for controlling access to calendar data by members of each group to which calendar data and associated schedule belongs

Abstract (Basic):

... The **calendar** data (120) includes data corresponding to **schedule** of events for **schedule** . The set of access rules (124) includes rules for controlling access to **calendar** data by members of each **group** to which **calendar** data and associated **schedule** belongs. The administration **software** (126) includes data for allowing set of access rules to be determined by separate administrator.

... For use by business to **schedule** business related **appointments** such as hair salon **appointments** , doctor's office **appointments** , oil change service **appointments** , for **scheduling** non-consumable resources like barber chair, dentist chair, meeting room, oil change station, examination room in doctor's office for **scheduling** consumable resources like shampoo, motor oil and tongue depressors...

... **Scheduling software** allows **customers** to have controlled **level** of effective access to calendars of employers of business. The scheduling **software** eliminates and minimizes the need for person to check multiple calendars when performing scheduling tasks and allows time saving by providing all relevant scheduling and calendar information in single calendar. **Scheduling software** allows **group** administrator to set and maintain calendaring and **scheduling** rules for **group** of **participants** and allows one **calendar** to be used in connection with different **groups** .

Alternate- route selection method for network system involves judging whether the path belongs to any process group , and ranking the route costs of alternate- route candidates

Abstract (Basic):

... The path which searches for an alternate route is judged whether it belongs to any process group. The route costs of the alternate- route candidates are ranked based on a specification standard. The process groups are judged. Alternate- route candidate 's specification ranking is determined at the time of specification of an alternate route .

... a) an alternate- route selection apparatus...

...Shortens time necessary for specifying an alternate route since alternate route can be selected by technique that depends on each path...

...The figure is a diagram showing the execution of the alternate- route selection method...

Work requests assigning method among servers in multi- system shared data environment

Abstract (Basic):

... One or more eligible systems having a minimum predefined capacity utilization at lowest importance **level** across sysplex is identified. One or more servers residing on the eligible systems are identified for assignment of **work** requests to them.

... An INDEPENDENT CLAIM is included for **work** requests **assigning** apparatus...

...For **assigning** and balancing new works and session requests among **servers** in multi-system shared data (sysplex) environment...

...By spreading new session to an additional **server** , sysplex performance is enhanced, hence further effectuating the sysplex policy. Reduces latency of **work** flow when more sessions are placed at any given system within small **time** period...

...The figure shows flowchart of eligible and **candidate** systems, and **server** determination...

Computer **system for use in temporary help business...**

...screens applicants, matches skills to job orders, monitors work schedules and stacks jobs

...Abstract (Basic): The **software** system operable on a digital **computer** screens temporary help **employee** applicants, tests their **skills** and receives and records job orders from one or more clients of the temporary help business. The **software** then **matches employees** to job orders, monitors **employee** performance, determines their pay and prints payroll checks, determines an amount due from each client...

...The **software** at user activation, can perform 'near' **matches**, wherein **employees** are matched to job if they are likely to suitable to a job or can be made available by rescheduling for a job. The **software** permits 'stacking jobs' wherein more than one future **job** can be **scheduled** for any **employee**. Also, the system can communicate **electronically** under **software** control to receive **job** orders from clients, and transmit billing information on **jobs** performed to clients...

...USE - **Scheduling** personnel suited to particular tasks for **work** on temporary basis...

Personnel planning, scheduling, and management unit...

...organising server into management unit, defining tour template describing bounded work shift, and correlating tour template with forecast to generate tour unit

...Abstract (Basic): Method involves organising a team of **servers** into multiple management units each of which has one or more **group** of **individual servers**. One or more tour templates describing a bounded **work shift** are defined and a forecast generated of an expected event load and the number of **servers** required. The expected event load is allocated among the management units...

...correlated with the forecast to generate a set of tours for each management unit. The **individual servers** of each management unit are assigned to the generated tours for the management unit and a **schedule** for each **individual server** of the management unit is generated...

...USE/ADVANTAGE - E.g. for **scheduling** staff in telephone call centre. Capable of accommodating significant change in environment condition, and provides...

...Abstract (Equivalent): The method involves predicting a number of agents required to provide a given service **level** in a force management system is described. The force management system has the capability to generate call handling performance data including average call arrival rate and average handling **time** per call. From this data, the method calculates an offered load 'a' equal to the average arrival rate of calls for the system **times** the average handling **time** per call. Using the calculated offered load, the method calculates two predictor values and then...

...C calculations to locate the desired number of agents required to

provide a given service level .

...

...The **scheduling** method uses an interface to define one or more tour templates describing a bounded **work shift** having **work** rules and operating constraints for an environment in which there is a constantly varying event load. The personnel includes a team of servers of equal **skill** responsible for servicing the constantly varying event load. Per-server preferences are defined for particular kinds of **work schedules** within the limits imposed by the templates...

...Selection policy rules are defined for which servers **work** when their number exceeds demand. An event load expected to occur during a forecast **time** period and the number of servers required to service it are determined. The templates are correlated with the forecast to generate a set of **candidate** tours, each defining a daily **work schedule** uniquely associated with the forecast event load for a particular **day** yet theoretically fillable by any one of the personnel. The servers are automatically **scheduled** to the **candidate** tours according to the preferences and the selection policy rules...

...The force management system includes a management display system for managing server **schedules** during a forecast **time** period. The system generates a **schedule** management screen which includes a timescale and a set of **schedule** activity codes for each server juxtaposed with the timescale to indicate the server's **availability** to respond to an event during the server's **schedule** .

...

...a companion performance analysis screen. The performance analysis screen includes a timescale representation of forecast **time** period intervals, and displays call handling performance data for each interval comparing actual event load during the forecast **time** period with the event load expected to occur during the forecast **time** period

...

...USE/ADVANTAGE - Planning, **scheduling** and managing personnel in environment having varying workload by **time** of **day** and by week to be staffed with variable number of servers

...Title Terms: **SCHEDULE** ;

Inquiry notifying for electronic calendar system...

...Abstract (Basic): A method is described for **automatically** notifying a user of any type of inquiry made against any entry on his/her **calendar**. Capability is also provided to allow **calendar** entry security information to be exchanged between systems either locally or remotely. Security is provided for giving or denying access to **calendar** entries. Securing information in an **electronic** calendaring system is an important requirement in any system with confidential information. Salary, sales and...

...a company's entire contingent to view, other information such as staff meetings or lunch **appointments**, might be general enough to be of importance to a broader **group** of people. A method is necessary to manage and track access to the **calendar** information...

...The method establishes a personal status list to determine who should have access to different **classes** of entries. A list of names and their associated security **levels** is used. The list is compared with the particular **calendar** entry to determine if an **individual** is to be denied or granted access. Information could also be exchanged between other systems...

...for remotely creating, changing and deleting calendar entry security from a remote terminal or system. **Automatic** notification and tracking of accesses made to **individual** entries on a **calendar** is also provided. For high security purposes a user has the option of requesting immediate...

...approach is that anyone using the system can protect the information contained in his/her **calendar**. Another advantage is that anyone can track the distribution of information

...Title Terms: **CALENDAR** ;

ASSISTANCE SYSTEM OF **EMPLOYEE** **SHIFT** PLAN

INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To easily evaluate quality of a **shift** plan, to easily optimize the **shift** plan **matching** with **skills** and hopes of each **employee** , to improve creating technique of planning of an **automatic** **shift** plan and to allow using a result to a concrete management analysis.
SOLUTION: In an assistance system of **employee** **shift** plan, reference values of sales or the like are **automatically** computed based on the past track records to evaluate the values in comparison with the result of the **shift** plan. When planning the **shift** plan, **skill** displays of each **employee** are used and the number of working **hours** and the like hoped by **employees** are referred. Then, a **computer** **automatically** reads conditions such as the hopes of the **employees** to evaluate them.

ABSTRACT

PURPOSE: To economically and efficiently advance **work** based upon a common subject without requiring **time** adjustment in each **worker** at the **time** of executing co-operative **work** by plural **workers** working at separated places by managing the speeches of respective **workers** joining in a conference by a master **computer** and transmitting the speeches to respective **group computers** in relation with display positions...

...CONSTITUTION: The master **computer** 1 provided with a master file 2 is connected to respective **group computers** 3 through a **network** 4 and the **computer** 1 records and manages the contents of speeches transmitted from all the **group computers** 3 in the master file 2. Each **group computer** 3 inputs heading position information specifying the contents of the conference to which the contents of its speech belong at the **time** of transmitting the speech. The master **computer** 1 analyzes the heading position information, stores the analyzed result as a chain of heading **level** information arranged based upon a common dispute point and returns the stored contents to the **computer** 3.

WORK SEQUENCE PREPARING METHOD IN PRODUCTION PROCESS

Ginger R. DeMille

INTL CLASS: G06F-015/21

ABSTRACT

PURPOSE: To reduce the **computer** cost, and to increase the processing speed by setting a **candidate** selecting **route**, selecting a **candidate** in accordance with its sequence, and executing **ranking** by using an evaluating function, in the case plural **candidates** exist...

...CONSTITUTION: In a magnetic device 2, data, a key item, etc., required for determining a **work** sequence are stored in a file or a **data base**, and to a host **computer** 1, a **work** station 4 is connected through a line (a leased line or a telephone line) 3, and also, to the **work** station 4, a magnetic disk device 5 is connected, and a result of **scheduling** is stored therein. In such a state, with respect to a material to be worked...

... working, the number of pieces which can be collected to a suitable number therein is **grouped**, the whole is classified into plural pieces, and to each of them, a **candidate** selecting **route** is set in advance, and based on its **route**, a **candidate** is selected, and in the case plural **candidate** exist, they are subjected to **ranking** by using an evaluating function and the **work** sequence of a material to be worked, in the classification is determined.

?

Abstract (Basic):

... defined as a primary key, in response to an installation request at application program run- **time** . An object of the handle **class** is instantiated in response to the request. The handle object has instance variables representing one or more fields of the handle **class** defining unique identity for the object.

... One or more fields represented by instance variables of the handle **class** defining an unique identity for the object, are selected. A mapping **software** code is generated in a high- **level** language. The code defines mapping between **group** of columns predefined as a primary key and instance variable representing fields of handle **class** defining an unique identity for the object. An INDEPENDENT CLAIM is also included for object...

...For relational **database** management for storing and accessing data relating to financial accounts, inventory, **customers** and other matters...

...The figure illustrates the **software** elements of the mapping system...

Computerized work project assignment method used in telecommunication fields

Abstract (Basic):

... An assignment of a **work** project (j) to a **worker** (i) is determined using linear programming. The determination is done based on matching the **skill** requirements of actual and forecast **work** project with **skill** set of **worker** and limiting the **hours** of **worker** to less than or equal to h(i)'. **Work** projects that are not assigned are deferred and process of assigning is continued.

... The actual and forecast **work** project data identifying a **work** project (j) including the **skill** requirements and **time** commitment for completing the **work** project are received by a **computer** . The **worker** data identifying a **worker** (i), including **skill** set for each **worker** and the **hours** available h(i) for each **worker** are also fed to a **computer** . Based on these data, several assignments are made for each and every **worker** . An INDEPENDENT CLAIM is also included for a **computerized** work- project assignment system...

...For **automatically** accumulating routing, **assigning** , dispatching and recording the work of each personnel in the field of telecommunication
...
